

In the Specification

Please delete the abstract on page 22 of the application and replace it with the following abstract:

ABSTRACT

A system determines the physical configuration of a convertible checkout station and configures the software to operate the station in correspondence with the determined configuration. The system comprises a physical configuration actuator that responds to a checkout station physical configuration and a physical configuration signal generator responsive to the actuator to generate a signal identifying the physical configuration of the checkout station. The signal may be provided to a processor that controls operation of the station and the processor uses the signal to configure software for the station.

The original abstract with markings to indicate the changes resulting in the replacement abstract reads as follows:

ABSTRACT

A system determines the physical configuration of a convertible checkout station and configures the software to operate the station in correspondence with the determined configuration. The system comprises a physical configuration actuator that responds to a checkout station physical configuration and a physical configuration signal generator responsive to the actuator to generate a signal identifying the physical configuration of the checkout station. ~~The physical configuration actuator may be a tab, mounted member, or the like. The signal generator may be a plunger switch that is mounted to a checkstand, sliding drawer, or scanner of the station. The actuator engages the switch to~~
